

This is a **header text also in red**

This is a very simple template that will help us to illustrate the basics of the replace method.

First we are going to replace a standard variable: replaced **text**.

In this paragraph we are going to replace natural text: [external link](#).

A simple list:

- first
- *second*
- third

And a simple table:

Product	Price
Smart phone	\$430.00
MP3 player	\$49.99
Camera	\$198,49

Now the same variable replaced by different values: first one, second **two in red** and last three.
